

HYDRAULIC CATTLE SQUEEZE CHUTE

The **2W Hydraulic Cattle Squeeze Chute** utilizes special design features to vastly increase cattle processing efficiency while still being easy to use and causing minimal stress to both the livestock and their handler. Utilizing two synchronized cylinders to operate the neck extender and additional cylinders to open and close the side doors ensuring a well balanced and comfortable position for the livestock. The ability to comfortably immobilize the animal, paired with opening side doors, a heavy duty brisket bar, and rear access allows full access for medical treatment procedures and general health check-ups.

The chute controls are easy to navigate and the eight feet of hydraulic hoses allow the controls to be positioned away from the chute on either side.
